

CVPS has done it again. In support of our continuing efforts to bring you the latest and greatest in valet system products and technology, we are proud to announce:

CVPS SmartCode Valet Tickets

Did you know that barcode scanners on the market today will scan "ANY" barcode? This can open the door to significant security and revenue concerns.

Dishonest employees may be subverting your valet system by parking vehicles in the garage using barcoded items other than your officially sanctioned ticket stock. While you may detect this dishonesty through the course of normal audits, *why allow it to happen in the first place?*

Our SmartCode Valet Tickets work in conjunction with our CVPS Valet Systems to ensure no vehicle is parked without the properly associated valet ticket. In addition, as an integral part of our CVPS Valet Systems, these new tickets provide:

Data Integrity:

- **No more strange ticket numbers in the system as a result of scanner misreads or valet malfeasance**
- **Reduced incidence of ticket misreads. The system checks for the correct combination of items in the barcode to verify accurate reads**

Audit Control:

- **Cleaner audits that insure a high comfort level with accuracy of data in comparison with results**

Revenue Control:

- **Vehicles cannot be parked in a CVPS Valet System equipped garage using "any" bar code (soda can, cigarette pack, etc.) You tighten the revenue controls compared to a standard ticket system.**
- **No foreign tickets can be used in the system and the resultant revenue going unreported.**

Ticket Order Alert Inventory Control:

- **On screen and email alerts can eliminate last minute orders and the expense of expedited shipping charges. Additional rush ticket premiums can be avoided as well.**
